Modelfile

Modelfile이란

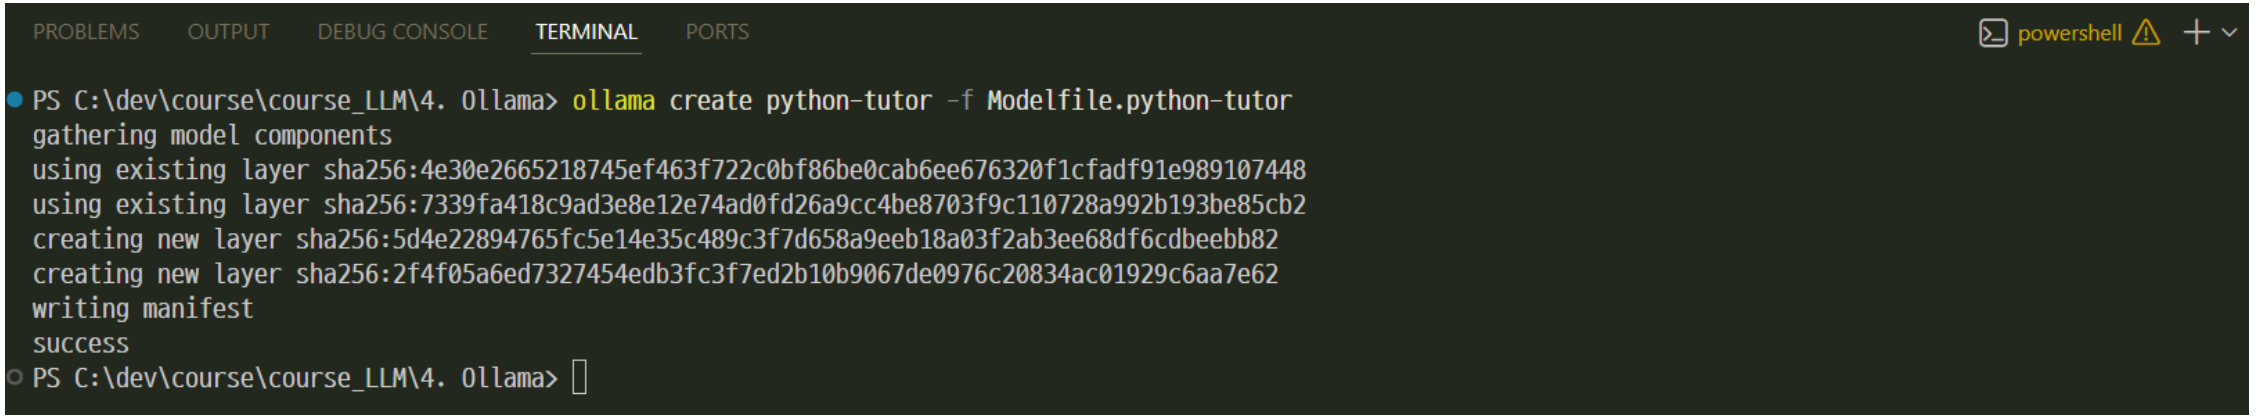

`Modelfile`은 모델을 커스터마이징하기 위한 설계도입니다.

```
FROM gemma4:e2b
PARAMETER temperature 0.7
PARAMETER top_p 0.9
PARAMETER num_ctx 4096
SYSTEM """
당신은 친절한 한국어 Python 선생님입니다.
답변은 쉬운 비유, 짧은 코드, 확인 질문 순서로 작성하세요.
"""
```

커스텀 모델 만들기

이 폴더의 `Modelfile.python-tutor`를 사용해 수업용 모델을 만들 수 있습니다.

```
ollama create python-tutor -f Modelfile.python-tutor
```

생성된 모델 확인

```
ollama list
```

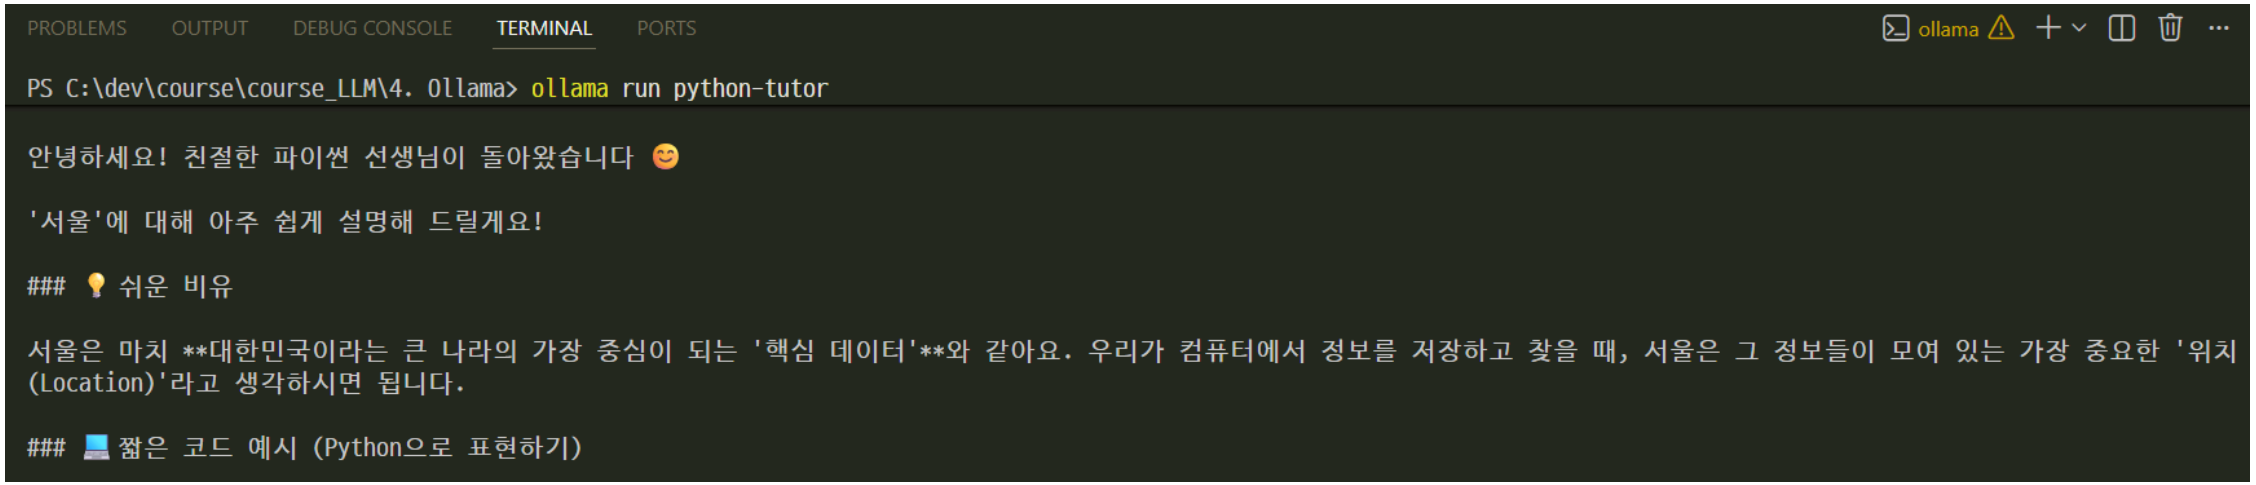

> 생성된 모델의 Modelfile을 확인할 수도 있습니다.

```
ollama show --modelfile python-tutor
```

생성된 모델 실행

```
ollama run python-tutor
```

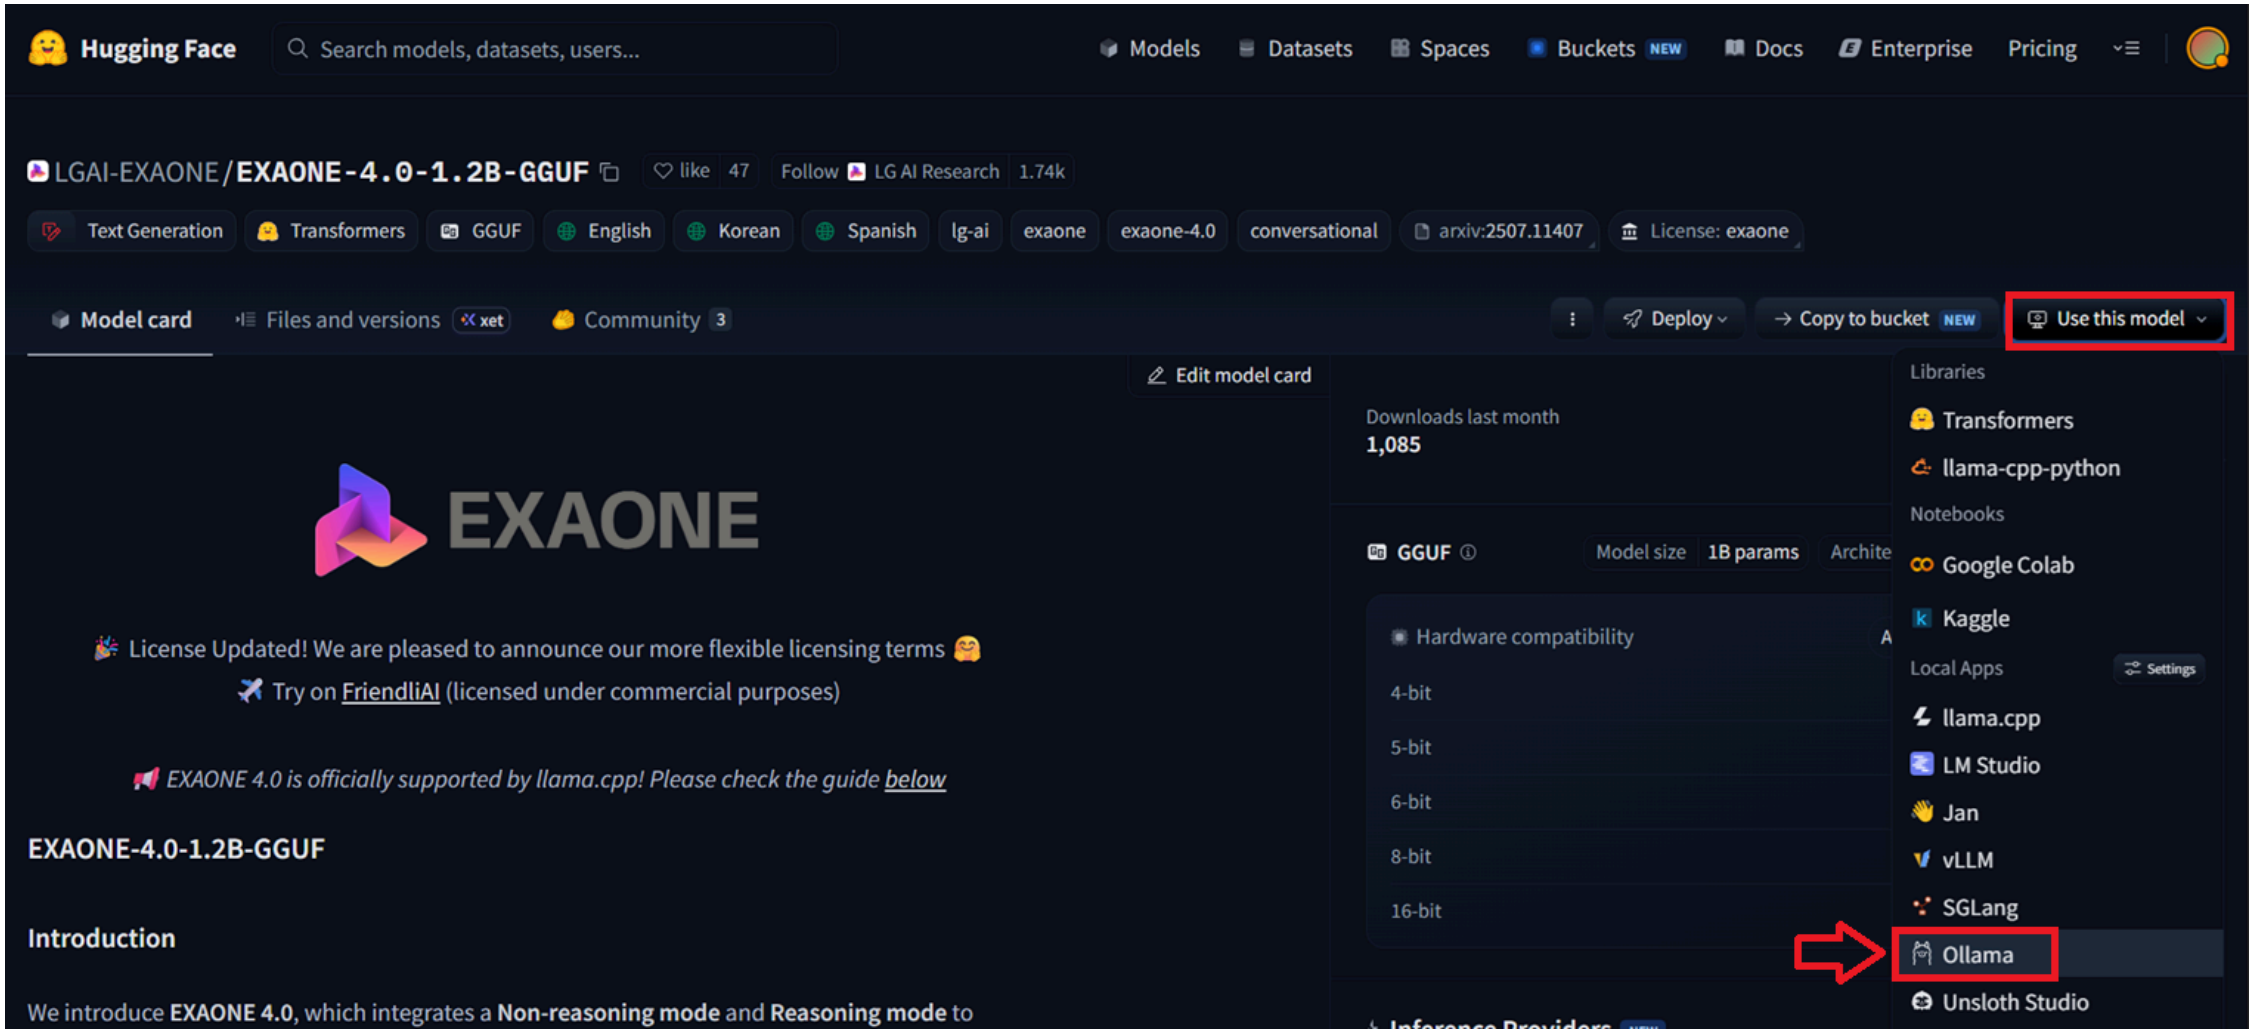

Hugging Face GGUF 모델 사용

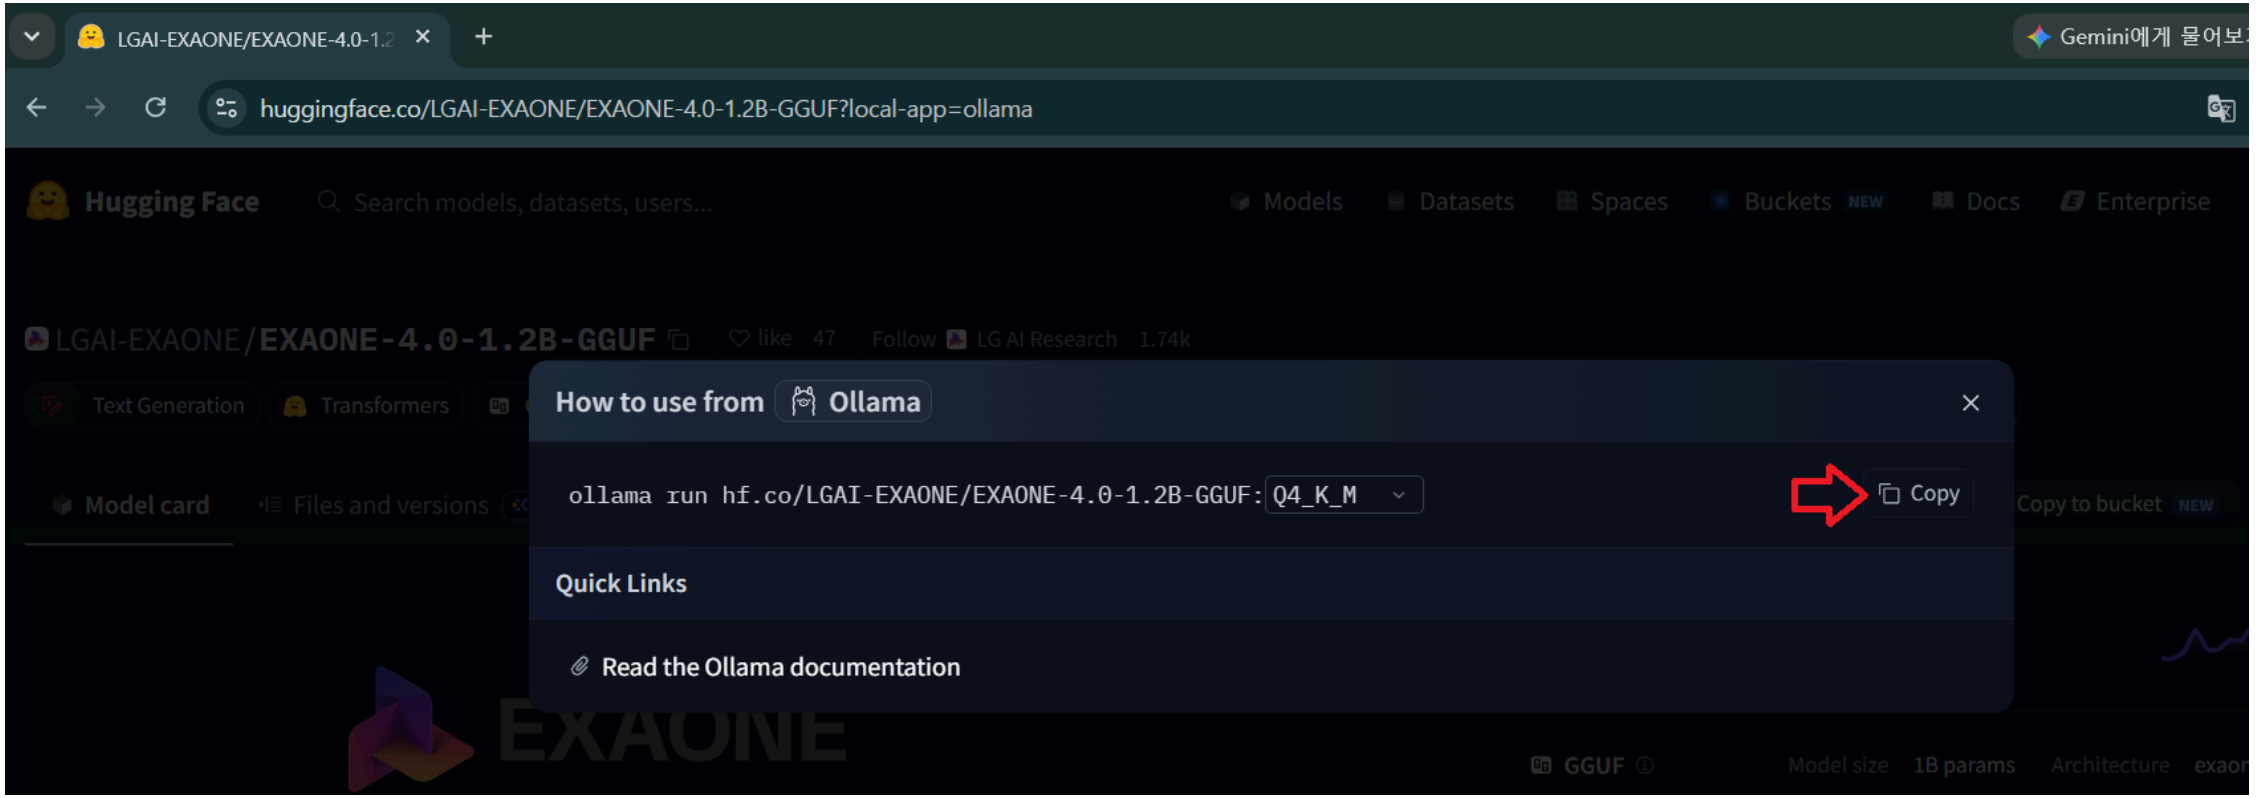

Hugging Face의 GGUF 모델도 Ollama에서 실행할 수 있습니다.

```
ollama run hf.co/{username}/{repository}:{quantization}
```

예시: EXAONE-4.0-1.2B-GGUF

>>> 대한민국의 수도는?
Hmm, the user just asked "Which is South Korea's capital?" That seems straightforward but let me think carefully.

The question appears to be in Korean - "대한민국의 수도" directly translates to "South Korea's capital." Based on standard knowledge, this refers to Seoul.

I recall that since 1948 when the Republic of Korea declared independence from Japan, Seoul has been the political and cultural center for decades. It's not just a city name
- it carries historical weight as South Korea's national symbol.

The user might be testing basic geography knowledge or preparing for some trivia quiz. Since they didn't specify context beyond the question itself, I'll respond clearly and
concisely with Seoul while confirming it's always accurate despite occasional administrative changes (though none have occurred recently). No need for complex explanations
unless they ask follow-ups.
</think>

대한민국의 수도는 **서울특별시**입니다. 1948년 대한민국이 공화국으로 독립되면서 헌법상 중앙정부 기관 소재지를 설정한 것부터 서울이 주요 정치·경제적 중심지 역할을 해왔습니다.
