단계3: Default branch 변경 > Dev

The screenshot shows the GitHub interface for the repository 'project-tutorial' by user 'mrcho593'. The top navigation bar includes links for Code, Issues, Pull requests, Actions, Projects, Security and quality, Insights, and Settings. The 'Settings' link is highlighted with a red box and a red arrow pointing to it. Below the navigation bar, the repository name 'project-tutorial' is displayed with a 'Private' label. The main content area shows the 'main' branch selected, with a commit history and a README file. The README content is partially visible, showing the title 'proejct-tutorial'.

☐ Template repository

Template repositories let users generate new repositories with the same directory structure and files. [Learn more about template repositories.](#)

Default branch

The default branch of a repository is the branch that pull requests and code commits are automatically merged into.

Release

Update default branch

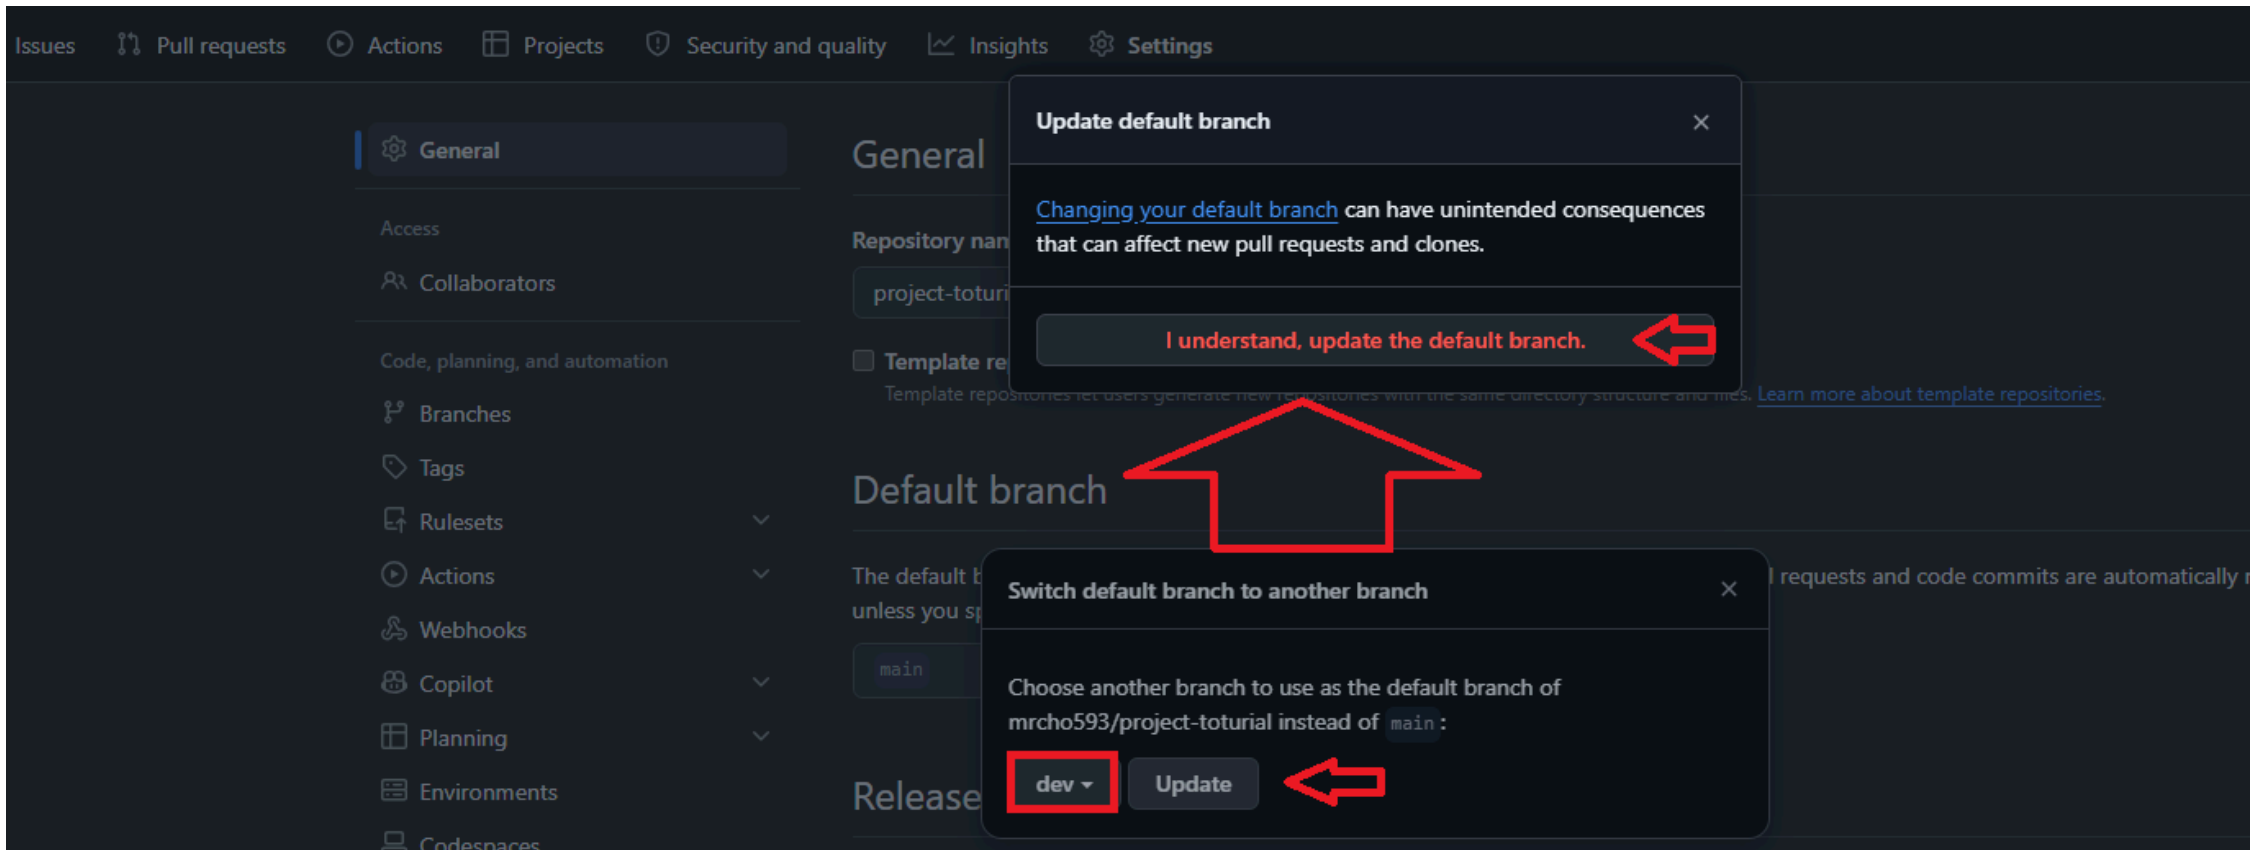

Changing your default branch can have unintended consequences that can affect new pull requests and clones.

I understand, update the default branch.

Switch default branch to another branch

Choose another branch to use as the default branch of mrcho593/project-tutorial instead of main:

Default branch

The default branch is considered the "base" branch in your repository, against which all pull requests and code commits are automatically made, unless you specify a different branch.
